BACKGROUND:

- Nexus338, as the fiduciary sponsor of iGPS, selected PIMCO’s asset allocation methodology (proprietary allocation algorithm) to provide personalization to each participant’s retirement portfolio using available personal data available on recordkeeping platform.
- The five personal data points available on recordkeeping platforms are:
 1. Date of Birth,
 2. Salary/Pay,
 3. Account value,
 4. Deferral contribution % of salary, and
 5. Employer matching or profiting contribution % of salary.
- Based on the five data points, a reasonable projection can be made for each participant’s Social Security at Normal Retirement Age.
- The PIMCO allocation algorithm replaces the standard national average data with specific personal data and constructs a customized portfolio that efficiently calibrates risk and reward parameters for each participant. This process is repeated each quarter when new information and updated data is made available on the recordkeeping system.
- Nexus selected PIMCO RealPath Blend target date funds in Collective Investment Trust as the building blocks to personalize each participant’s portfolio.
- iGPS is available through the iJoin platform whose technology connects iGPS with recordkeepers and custodians, and enables (1) personalization through custom portfolio construction based on PIMCO’s algorithm and (2) instruct custodians to effect the allocation in a mix of PIMCO RealPath Blend CITs.
